

Q8 Mahler G5

Customer requirements:

- Problem-free operations
- Extended drain interval
- Low deposit tendency

Customer:

PowerGen (Biogas producer)

Engine:

GE Jenbacher J 320

Q8Oils solution:

With traditional stationary gas engine oils there was a clear correlation between ash-content and deposit tendency. With 'clean technology' Q8 Mahler G-series this is not the case. A product like Q8 Mahler G8 (0.8 %-ash) controls deposits better than many traditional (0.5 %-ash) oils. Q8 Mahler G8 was proposed at the customer in Belgium (in biogas operations). Engine A was lubricated by 0.57 %-Ash PetroCanada Sentron LD 5000 and Engine B was lubricated by Q8 Mahler G8. The additional detergent capacity of Q8 Mahler G8 improved the oil drain.

Results:

+25%

Increase in drain interval

With problem-free operations at the customer.

All customer demands were met.
